TREASURE JESTS

BY MASTER CARVER PETER CALVESBERT
FIXED EDITION OF 300

The Gila monster is a venomous lizard native to the southwestern U.S. and northern Mexico. Not only did Peter painstakingly sculpt its reticulated pattern, but he included numerous secrets. Its Latin name, *Heloderma suspectum*, means studded skin. *Suspectum* derives from palaeontologist Edward Drinker Cope's suspicion that the lizard may be poisonous due to its teeth grooves. *Gila* refers to the Gila River Basin in Arizona, where these lizards were once plentiful. Exenatide is a drug used in the treatment of diabetes and is a synthetic version of a hormone found in the saliva of the Gila monster. Open the lid of this fixed edition box figurine to find a baby hatching Gila and Peter's initials under one of the rocks.
